Min Khant Kyaw

Frontend engineer specialising in React, Next.js and TypeScript — building production web interfaces, from virtualized data tables to in-browser computer vision.

Experience

Software Engineer · MeeeetUp Jan 2025 — Present

- Build and ship two production Next.js products — an event-management platform and a coworking reception system — on a single shared, multi-tenant engine where a second product launches through configuration rather than a fork (Next.js, React, TypeScript, Turborepo monorepo).
- Engineered a touchless facial check-in pipeline layering in-browser MediaPipe quality gating in front of AWS Rekognition matching to control cost and latency.
- Modeled the platform's multi-tenant relational domain in Prisma and PostgreSQL, with Zod schemas as the single source of truth across the database, API routes, server actions, and forms.

Frontend Software Engineer · KBZ Bank Nov 2023 — Jan 2025

- Engineered the frontend of a host-to-host payroll tool end to end — an Excel-upload, Zod-validated, editable and virtualized review table modeled as a Redux state machine.
- Built customer-facing and internal banking systems for Myanmar's largest private bank under tight reliability and regulatory requirements (React, NestJS, Oracle Database).
- Extended an NPS platform and integrated it with the branch queue-management system to print survey QR codes onto queue tickets per branch and topic.

Web Developer · Myanmar Information Technology Oct 2022 — Nov 2023

- Engineered a drag-and-drop room-reservation calendar — a visual booking timeline — for Odoo's free Community edition, where Enterprise planning views aren't available.
- Customized Odoo's point-of-sale for retail clients and integrated it into each client's wider Odoo deployment.
- Built and customized Odoo ERP solutions for enterprise clients across vertical markets using Python backend modules and JavaScript frontends.

Freelance Developer · Independent 2022 — Present

- Built BurmaUni, an EdTech operations portal, around a custom JWT-based RBAC system (route / component / action enforcement), a concurrency-safe silent-refresh interceptor, and a reusable URL-state data-table hook across ~20 server-side grids.
- Built MyanHealth, a Burmese-first health-news WordPress theme, with a self-built ad manager and a modern Tailwind CSS v4 + esbuild pipeline.
- Architect and ship full-stack products for clients alongside full-time roles, owning technical decisions from setup through deployment.

Skills

Frontend
React, Next.js, Astro, Vite, Tailwind CSS, shadcn/ui, Redux, TanStack Query / Router / Table, Zustand

Languages
TypeScript, JavaScript, Python, PHP

Testing
Vitest, Playwright, Storybook

Backend
Node.js, NestJS, Next.js (RSC & Server Actions), Odoo (Python), WordPress (PHP)

Database & ORM
PostgreSQL, OracleDB, MySQL, Supabase, Prisma

Auth & Payments
NextAuth, JWT / RBAC, Stripe & Stripe Connect

Cloud & Tooling
AWS (S3, Rekognition, SES/SNS/SQS, Lambda, Amplify), Vercel, DigitalOcean, Cloudflare, Docker, GitHub Actions, Turborepo, esbuild

Selected Projects

BurmaUni — EdTech Admin Portal
~30-module operations portal around a custom JWT/RBAC system and a reusable URL-state data-table hook.

Meeeetup — Event & Coworking
Two production Next.js products on one shared, multi-tenant engine (Turborepo), with touchless facial check-in (MediaPipe + AWS Rekognition).

View all projects

Education

The European International University (EIU-Paris)
2026 — 2027 (expected)
Information Technology — specialising in Cloud and DevOps

University of Technology (Yadanarbon Cyber City)
2015 — 2020
Computer Engineering
